About Acceleronix

We provide enterprise with a quick and simple route to adopt and integrate IoT solutions. No matter the industry, we identify specific technological needs and business objectives – then provide the products to make it happen. Because we supply hardware, connectivity and management software, it's easy for us to create bespoke solutions that work exactly as required.

Our vision

Acceleronix drives digital transformation by empowering businesses to excel with connected solutions.

Our mission

We are a global IoT solutions and services provider primarily focused on serving OEMs and enterprises. We provide a broad portfolio of connected modules, edge-device software, vertical platforms, mobile applications and connectivity as a service. Our solutions are designed to activate and manage all aspects of IoT products, from development to data-management and visualization.

Our values

We aim to build a connected world composed of high-quality and trusted products. We hope to achieve this with our four key values:

Quality

Security

Innovation

Client value
creation

Connectivity as a service

Global connectivity

- Global coverage of over 500 network operators
- Access to 2G, 3G, 4G, 5G, LTE-M and NB-IoT networks
- Support for network functionality e.g. PSM and eDRX

Commercial flexibility

- Tailored commercials to meet your requirements
- Automated tariff optimization, removing bill shock
- Pay-as-you-go, pooling, pre-paid commercial models

Connectivity management

- Single platform to manage, control and analyze your IoT deployments
- Near real-time data to drive decisions
- Full automation of management tasks
- Functionality to support third-party deployments

Customer experience

- Dedicated first- and second-line support
- Single point of contact
- Self-service portal
- End-to-end support – design, build, connect, manage

Connectivity Management Platform

Features and capabilities

- Secure E2E data access
- User administration
- Proactive alerting and trigger management
- Remote SIM provisioning (RSP)
- Enterprise hierarchies
- Programmable APIs
- Self-service tools / service diagnostics
- Reporting – standard and bespoke

Summary

SIM Technology

- | Single SIM deployment, with eUICC functionality
- | Bootstrap IMSI profile, providing resilience and redundancy
- | Fully 3GPP / ETSI / GSMA compliant

Security

- | Highly secure platforms and hosting centers
- | Data encryption options / dedicated APN, VPN options, etc.
- | E2E security options to suit customer requirements

Commercial proposition

- | Tailored commercials, based on each customer's geographical, usage and technology requirements

Market-leading CMP

- | Proven, scalable and flexible connectivity management platform
- | Offering visibility, monitoring and management of SIMs
- | Global instances, geo-resilience
